

WHAT IS CLAIMED IS:

1. A swing door rotatably fixed to a cassette inlet of a magnetic recording-and-reproducing device comprising: a rectangular plate having pivot pins
5 projecting from the opposite ends of the upper longitudinal edge of the plate, the opposite pivot pins being supported by counter bearings of a front panel of the device, the upper longitudinal edge of the plate having a recess notched inward apart from one of the opposite pivot pins, the rectangular plate having a resilient member fixed to the recess.

10

2. A swing door rotatably fixed to a cassette inlet of a magnetic recording-and-reproducing device comprising: a rectangular plate having pivot pins
projecting from the opposite ends of the upper longitudinal edge of the plate, the opposite pivot pins being supported by counter bearings of a front panel of the
15 device, the upper longitudinal edge of the plate having a recess notched inward apart from one of the opposite pivot pins, the rectangular plate having engagement pins in the recess to be in alignment with the pivot pin, and a coiled spring fixed to the recess with their opposite end-extensions laid on the plate and the front panel.
